

Protecting against **mozzies**

Getting rid of standing water is the most effective way to reduce mosquitoes at a construction site.

Dump, turn over or cover anything that gathers water

Create holes to drain water from containers that can't be thrown out

Empty clogged rain gutters and fill pot holes and ditches

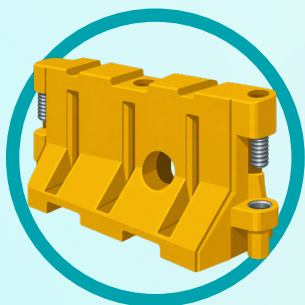

Keep tarps flat to avoid water pooling

Throw away fast food containers, cups, cans and bottles

Keep bins covered and regularly empty

Fill with sand or apply Aquatain

Use mosquito dunks (BTI) in standing water which can't be emptied

Use DEET based insect repellent and wear long sleeved clothes and long pants to prevent bites
